Elevator Pitch

Concept

Create an online store with solid UX design principles.

Gain experience developing a website, starting from a given UX/UI concept, and implementing an MVP using rapid prototyping frameworks.

Process

As a Customer,
I want to find retail products,
so I can see their product details.

- It's done when I have a *Homepage* with categories and search box.
- It's done when I have a *Product listing page* filtering by categories and/or search keywords.
- It's done when I have a *Product details* page displaying all the related info of the selected product.

Homepage

→ As a Customer,

I want to go to the homepage,

so I can search for products,

and access to the product categories.

Product listing page

- As a Customer, when I enter an input on the search box and click on the search button, I want to see a list of products matching my search input.
- As a Customer, when I click on a category on the navigation, I want to see a list of products related to the category.

Product details page

→ As a Customer,

when I click on a product item,

I want to see all the related details of the product.

Technologies used

- [Semantic HTML5 markup](#)
 - [CSS custom properties](#)
 - [Flexbox](#)
 - [CSS Grid](#)
 - [Mobile-first workflow](#)
 - [Figma](#)
 - [Adobe Express](#)
 - [Tailwind CSS](#)
 - [Tailwind Elements](#)
 - [Font Awesome 6](#)
 - [Google Fonts](#)
 - [Vanilla JavaScript](#)
 - [Web APIs](#)
-

Project Planning

Breakdown of tasks and roles

- Elias, Jozef
 - ◆ Product details page
- Tyler, Warren
 - ◆ Product listing page
- Rodriguez, Daniel
 - ◆ Homepage

Challenges

- Find a mock up API with products and images.
- Limited monthly quota of request to the chosen Currency Exchange API.
- A few official Tailwind Components for free use.
- Short time and learning curve to learn Tailwind CSS.

Successes

- Integration of development tools like Prettier for Tailwind.
- Implementation of the responsive header and footer.
- Integration of the Mock Up Store and Currency Exchange Rate APIs.
- Implementation of the search functionality.

Demo

Next Steps

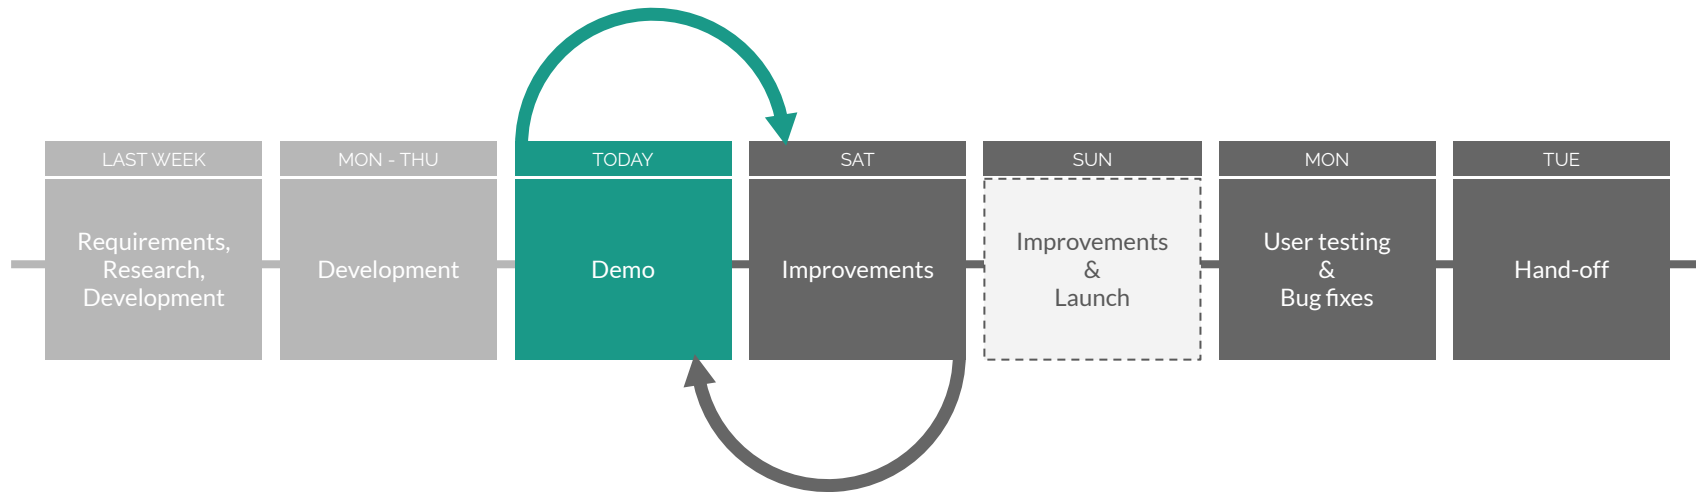

What next?

- Present the timeline.
- Improvements of features.
- User testing and bug fixes plan.
